How many profiles?

Spring Framework does not specify any explicit limit on number of profiles, however since some of the classes in Framework, like `ActiveProfilesUtils` used by default implementation of `ActiveProfilesResolver` are using array to iterate over profiles, this enforces inexplicit limit that is equal to maximum number of elements in array that you can have in Java, which is `Integer.MAX_VALUE` - 2,147,483,647 ($2^{31} - 1$).
